Stepping Motor  Motor Size: 42 mm sq. to 60 mm sq.
SANMOTION F3 is a 3-phase stepping system that provides precise positioning with simple control. The typical basic step angle is 1.2°, precisely controlled by pulse signals.

### System Configuration

- **Motor**
  - Motor cable (Option)

- **Power supply**
  - Molded case circuit breaker
    - Protects the power line. Cuts off circuit in the event of overcurrent.

- **Host Devices**
  - Pulse signal
  - PLC etc.

- **Driver**
  - Switches driver power on/off. Use together with a surge protector.

- **Noise filter**
  - Filters out incoming noise from power line

---

(Note 1) Axial play: Shaft displacement under axial load.
(Note 2) Radial play: Shaft displacement under radial load applied 1/3rd of the length from the end of the shaft.
Safety Consideration

The stepping motors are the products designed to be used for the general industrial devices. When using those, pay enough attention to the following points.

- Read the instructions carefully before installation and assembly, to ensure correct usage. Manuals can be downloaded from our website.
- Refrain from modifying or processing the product in any way.
- Consult with the distributor or professional experts for placement or maintenance services of the product.
- In case of the following uses of the product, contact with us for the special care required to the operation, maintenance and management such as multiplexing the system, installing an emergency electric generator set, or so forth.
  1. Use for the medical devices concerned with a fatal accident.
  2. Use for trains, elevators, and so forth that are likely to cause an accident resulting in injury, damage or death.
  3. Use in the computer system highly influential to the social life or the public systems.
  4. Use in other devices highly influential to maintaining the human safety or the public functions.

In addition to the above, consult with us for use in such a vibration environment as automobile or transportation. Make yourself knowledgeable and familiarize with the devices, safety issues and cautions before handling the product.

Indication by (Warning Label) on the product

Either or all of the following indications are given by the Warning Labels depending on the type of the stepping motor.

- This label is stuck near the high voltage part such as the electrically charged or cover-protected section, warning that the place where it is likely to cause an electric shock.
- This label is stuck near the GND terminals of the stepping motor for which grounding is required, suggesting that the terminals should be actually grounded.
- This label is stuck for the stepping motor to which the power source is applied in the voltage exceeding the safety standard, drawing attention against the electric shock.

Safety ranks of the cautions

Following four ranks are provided.

- **DANGER** Improper operations or use is most likely to result in serious injury or death.
- **CAUTION** Improper operations or use is likely to result in average or minor injury, or in property damage.

  In spite of the cautions with the **CAUTION** label, it may cause serious results. Either the contents of the labels is describing important cautions to be followed inevitably.

- **PROHIBITED** Indicates what shall not be done.
- **COMPULSORY** Indicates what shall be done.
**General matters**

1. Do not use the product in an explosive, flammable or corrosive atmosphere, watery place or near a combustible material. Doing so may cause injury or fire.

2. Have a person with expert knowledge for performing the transportation, placement, wiring, operation, maintenance or inspection of the product. Without such knowledge, it may cause an electric shock, injury or fire.

3. Do not work for wiring, maintenance servicing or inspection with the electric power on. Perform either of those five minutes after turning the power off, or otherwise, it may cause an electric shock.

4. When the protective functions of the product is activated, turn the power off immediately and eliminate the cause. If continuing the operation without eliminating the cause, the product may operate improperly and cause injury or a breakdown of the system devices.

5. Stepping motor may run out of order at the operating and stopping occasions, depending on the magnitude of the load. Put the product into use after confirming with the adequate trial test operation in maximum load conditions that the product performs reliable operation. Doing otherwise may cause a breakdown of the system. (Should the product run out of order in the use to drive upward/downward, it may cause a fall of the load.)

6. Do not touch the internal parts. Doing so may cause an electric shock.

7. Do not connect the stepping motor directly with the commercial power outlet. Doing so may cause an electric shock, injury or fire. The power shall be supplied to the stepping motor through the driving circuit.

8. Use the electric power source within the rated input voltage. Using otherwise may cause fire or an electric shock.

9. Connect the stepping motor to the ground. Using without grounding may cause an electric shock.

10. Do not harm, forcibly put a stress, or load a heavy article on the cable or connection terminals. Failure to do so may cause an electric shock.

11. Perform wiring with the power cable as instructed by the wiring diagram. Doing otherwise may cause an electric shock or fire.

**Operation**

12. Be sure not to touch the rotating part of the stepping motor during its operation. Touching it may cause injury.

13. Neither reach or touch the electric terminals while electric power is on. Doing so may cause an electric shock.

14. Never disconnect any of the connectors while electric power is on. Doing so may cause an electric shock and corruption.

**Maintenance services**

15. Place the product with a great care so as to prevent from the danger such as a tumble or a turnover.

16. Mount the product on an incombustible material such as metal. Doing otherwise may cause fire.

17. Confirm the rotating direction before connecting with the mechanical operation. Failure to do so may cause injury or a breakdown.

18. Do not touch the motor output spindle (including the key slot and gears) with a bare hand. Doing so may cause injury.

19. The stepping motor is not equipped with any protective device. Take protective measures using an over-current protective relay, a ground fault interrupter, a protective device from excess temperature, and an emergency stopping device. Failure to do so may cause injury or fire.

20. Do not touch the product for a period after the power is on or has been turned off, since the driver and stepping motor remain in the high temperature. Doing so may cause burns. Especially the temperature rises considerably of the stepping motor depending on the operating conditions. Use the motor on the condition so that its surface temperature becomes 100 °C or under.

21. Stop the operation immediately when an emergency occurs. Failure to do so may cause an electric shock, injury or fire.

22. Do not change adjustment to an extreme, for such a change results in the unstable operation. Doing so may cause injury.

23. When conducting the trial operation, make the stepping motor fixed firmly, and confirm the operation by disconnecting with the mechanical system before connecting with it. Failure to do so may cause injury.

24. When the alarm has been activated, eliminate the cause and ensure the safety to resume operation. Failure to do so may cause injury.

25. When the electric power recovers after the momentary interruption, do not approach the device because the system may re-start operation by itself. (Set the system so as to secure the safety even when it re-start on such occasion.) Failure to do so may cause injury.

26. Confirm that the electric power supply is all proper conforming to the specifications. Failure to do so may cause a trouble.

27. The brake mechanism of the motor with the electro-magnetic brake is to hold the movable section and the motor position. Do not use it as a safety measure, or doing so may cause the breakdown of the system.

28. Fix the key firmly when operating the motor with key individually. Failure to do so may cause injury.

29. Be careful when performing maintenance services or inspection about the temperature which rises highly in the driver and stepping motor frame. Failure to do so may cause burns.

30. Contact with us for repair. If the product is disassembled by the user, it may put it out of action.

**Transportation**

31. Handle the product with care during transportation so as to prevent from the danger such as a tumble or a turnover.

32. Do not hold with the cable or the motor spindle. Doing so may cause a trouble or injury.

**Retirement**

33. When scrapping the stepping motor, treat it for the general industrial waste.

**Storage**

1. Avoid the place exposed to rain or water drops, or in an environment with hazardous gas or liquid for storing the product. Failure to do so may cause a trouble.

2. Do not assemble or repair the product. Doing so may cause fire or an electric shock.

**General matters**

3. Do not remove the rating plate.

**Compulsory**

1. Store the product within the specified conservation temperature and humidity in the place not exposed to the sun beam.

2. Install an external emergency stop circuit to turn the power off for the instant halt of operation.

3. Put the product into operation in the specified ambient temperature and humidity.

**Transportation**

4. Excess loading of the product on the carrier may cause the load to fall in pieces. Follow the instructions given outside the package.

Cautions

- Read the accompanying Instruction Manual carefully prior to using the product.
- If applying to medical devices and other equipment affecting people’s lives, please contact us beforehand and take appropriate safety measures.
- If applying to equipment that can have significant effects on society and the general public, please contact us beforehand.
- Do not use this product in an environment where vibration is present, such as in a moving vehicle or shipping vessel.
- Do not perform any retrofitting, re-engineering, or modification to this equipment.
- The products presented in this catalog are meant to be used for general industrial applications. If using for special applications related to aviation and space, nuclear power, electric power, submarine repeaters, etc., please contact us beforehand.

The names of companies and/or their products specified in this catalog are the trade names, and/or trademarks and/or registered trademarks of respective companies.

*Remarks: Specifications Are Subject To Change Without Notice.
